WO 2004/113591 PCT/KR2004/001540

## What Is Claimed Is:

.5

10

1. An apparatus for producing ozone by electrolysis of water, the apparatus comprising:

- a) an anode for producing oxygen, ozone by electrolysis in water;
- b) a cathode for producing hydrogen by electrolysis in water;
- c) a solid polymer electrolyte membrane disposed between the anode and the cathode for transferring hydrogen ion produced by the electrolysis; and
- d) an auxiliary electrode disposed between the cathode and the solid polymer electrolyte membrane, wherein the auxiliary electrode passes hydrogen ion produced at the anode through the cathode, and wherein a scale is formed on the surface of the auxiliary electrode by a reaction of 2+ cation and OH-ion produced at the cathode, thereby alleviating scale formation occurring on the surface of the cathode.
- 2. An apparatus according to claim 1, wherein the auxiliary electrode has a mesh shape.
  - 3. An apparatus according to claim 1, wherein the auxiliary electrode is formed of stainless steel, titanium, platinum or platinum coating.
- 4. An apparatus according to claim 1, further comprising a spacer for providing a gap between the solid polymer electrolyte membrane and the anode.
  - 5. An apparatus according to claim 4, the spacer is formed of teflon.
